

### ***FXA-1018 HD TOURING COMPRESSOR/TANK BRACKET KIT***

AirFX has developed a mounting bracket kit for the 2000-2015 HD Touring model bikes. The compressor can be mounted to the bracket utilizing the vibration isolation mounting provided with the compressor, minimizing compressor noise. When used to mount the compressor, the bracket is mounted off the right side exhaust hanger under the bag, locating the compressor between the saddle bag and the rear wheel. On systems without an air tank, the air valve can be mounted under the compressor.

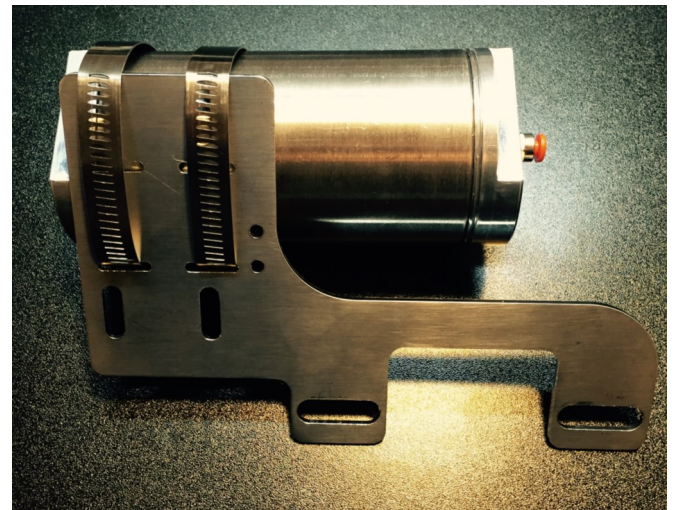

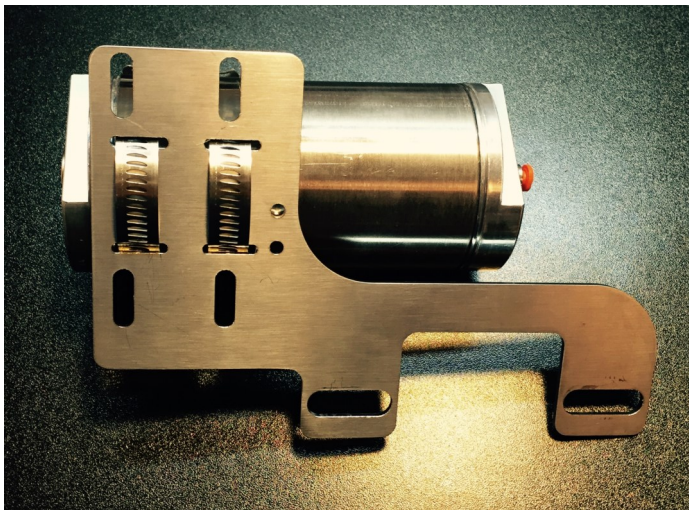

When used as an air tank mount, the bracket can be attached on the left side stock muffler hanger, tank attached with the clamps, and located adjacent to the exhaust. The kit includes the stainless steel mounting bracket, tank clamps, and mounting hardware.
